SOLAR PL2135 6/12V 3.5 Amp Pro-Logix Battery Maintainer from Clore Automotive

Clore Automotive introduces the PL2135, a 6/12 Volt, 3.5 Amp Pro-Logix battery maintainer from SOLAR. This unit controls each phase of the charging process to ensure that each battery serviced gets an optimal charge. It is compatible with a wide variety of battery types, including conventional, AGM, Gel Cell, Spiral Wound, Marine and Deep Cycle batteries.

Operation of the PL2135 is fully automatic, freeing the operator for other tasks and delivering the same consistent, beneficial charge every time. It is perfect for charging and maintaining the batteries in motorsports, lawn and garden, automotive, truck, RV, agriculture and marine applications. The advantage of the PL2135 is its automatic, worry-free operation and its ability to properly charge any type of battery found in the referenced applications. In addition, it features polarity protection, outputting current only when a proper battery connection has been made and protecting against many forms of operator error.

The PL2135 features a sealed case, keeping dust and debris out of the maintainer for durability and long life. With a convenient quick attach cord on the output side, the maintainer interfaces with several accessories equipped with a quick attach connector, including battery clamps (included), ring terminals (included) and a 12 Volt male adapter (optional). This provides the versatility to choose the right output option for each charging/maintenance application.

Clore Automotive is a leader in the design, development and manufacture of automotive service equipment for professionals and consumers, including jump starters, battery chargers, battery testers, power inverters, heavy-duty starting equipment, cooling system service equipment and automatic transmission fluid exchange equipment. More information can be found at www.cloreautomotive.com.
